## WalkOn Lateral.

The *WalkOn Lateral* lifts the foot and also stabilizes the ankle joint.

### Indication

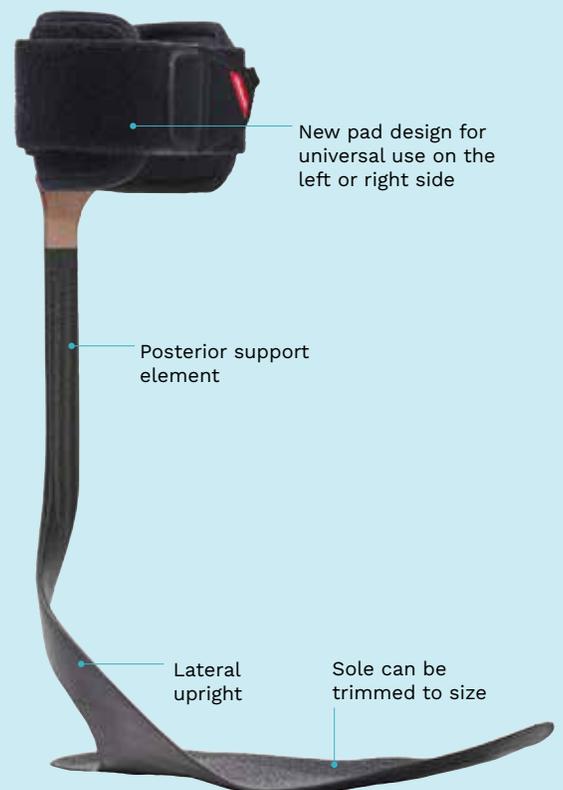

Drop foot, with or without mild spasticity, e.g. caused by:

- Peroneal paralysis
- Stroke
- Traumatic brain injury
- Multiple sclerosis
- Neuromuscular atrophy

The indication must be determined by the doctor.

### Benefits/advantages

- High energy return of the orthosis
- Effectively supports a physiological gait, even at different speeds and with different loads
- Stabilizes the ankle joint
- Increases the stride length by improving muscle dynamics
- The orthosis allows weight to be placed on the forefoot for climbing stairs and squatting
- Limits plantar flexion and supination when worn with a sturdy shoe
- Slim, lightweight design
- Optimized compliance thanks to a removable and washable pad/strap combination that can be aligned in the preferred direction for tightening the strap
- Optimized durability: adult sizes tested for two million cycles, or two million steps
- Material: carbon fiber prepreg
- Available in a variety of adult sizes
